1. Introduction

1.1. Purpose

This document is the Release Notes for the Bombardier* Release of TCNOpen* TRDP* Version as implementation of the communication profile defined in [Wire].

1.2. Intended Audience

The audience of this document and the users of the release are software engineers that want to adapt or to use TCNOpen* TRDP* as implementation of the communication profile defined in [Wire].

1.3. References/Related Documents

Reference	Number	Title

1.4. Abbreviations and Definitions

Abbreviation	Definition
ETBN	Ethernet Train Backbone Node
PD	"Process Data" Part of the in [Wire] defined communication protocol used for cyclic data transmissions based on UDP protocol.
SOA	Service Oriented Architecture
TCP-MD	"UDP Message Data" Part of the in [Wire] defined communication protocol used for event driven data transmissions based on TCP protocol.
TSN	Time Sensitive Network
UDP-MD	"UDP Message Data" Part of the in [Wire] defined communication protocol used for event driven data transmissions based on UDP protocol.

2. Product Definition

2.1. General Description

The TCNOpen TRDP is an open source implementation of communication profile described in [Wire] and does not include compiled libraries but source code and build instructions to be used for other platforms as well as examples for reference implementation.
TCNOpen TRDP includes:

- TRDPLight (the communication protocol stack and API for PD, UDP-MD and TCP-MD)
- TRDP Marshall – a service for marshalling/unmarshalling TRDP user data
- TRDP XML – a service for reading TCNOpen TRDP XML configuration files
- TRDP CTRL – a service to control the ETBN functionality
- TRDP DNR – a service for IP-URI address translation
- TRDP TTI – a service to access the train topology information data base of the ETBN
- TRDP SOA – a service to support service-oriented architecture (preliminary)
- TRDP SPY – a Wireshark plugin to interpret TRDP telegrams

It does not include but provides basic support for:

- TRDP LADDER – ladder support acc. to IEC61375-3-4
- TRDP SDT – a service for safe data transmission according to the definition in [Wire]

2.4. Targets

2.4.1. Primary Targets

TCNOpen TRDP is provided for a set of primary targets. Outputs for these have been verified during the release process.

Target	Use	OS	CPU-HW
Linux PC	General	Linux 64 bit	x86 comp.
Windows PC	General	Windows 10 64 bit	x86 comp.
Apple Macintosh	General	MacOS, Darwin	x86 comp.

Table 4: Primary Targets

2.4.2. Secondary Targets

TCNOpen TRDP is also delivered as an SDK with source code and example make-files only. The make-files serve as examples for building the binaries for different platforms and can be used as a template for specific platform builds. The following table shows the builds which have not been tested but have been taken care of within the source code.

Target	Use	OS	CPU-HW
Linux PC	General	Linux 32 bit	x86 comp, PowerPC, ARM
Windows PC	General	Windows7 32/64 bit	x86
Embedded Controller	General	VxWorks	PowerPC
iPad	General	iOS/iPadOS	ARM

3.2. SDK

To also support other targets than the platform does, TCNOpen TRDP is delivered as an SDK (Software Development Kit). The release is available under SourceForge (https://svn.code.sf.net/p/tcnopen/trdp/tags/trdp/2.0.2.0)". The release comprises items according to the tables below using the following file structure:

DirLevel1	DirLevel2	DirLevel3	Description

4. Installation

4.1. Platform

This version does not contain ready-made libraries or DLL (except for TRDP SPY) but only the SDK including the build environment configurations.

4.2. SDK

1. Unpack the file "TCNOpenTRDP 2.x.x.0.zip" into your development work area.
2. Check the files in config/ and src/vos for targets which fits your target
3. Use `make help` and `make myTarget_config` to select a tool configuration. Duplicate and edit a config/*_config file to customize your configuration, if necessary.
4. For windows environments, open the VSExpress2015/Win_TRDP_VS2015.sln file with MS Visual Studio Express 2015.

All source files/libraries/executables can be found in the folders described in chapter 3.2.

5. How to use

5.1. POSIX (Linux, macOS, QNX, Integrity)

Adapt the delivered configuration (config/*_config) for the makefile and compile the TRDP library.

5.2. VxWorks

Adapt the delivered configuration (config/*_config) for the makefile and compile the TRDP library.

5.3. Windows

Adapt and use the delivered Visual Studio Express 2015 (32/64 Bit) configuration and compile the TRDP library.

6.1.2. New or Enhanced Functions

Ticket #	Description
#282	Preset index table size and depth to prevent memory fragmentation
#287	Enhancement performance while receiving (HIGH_PERF_INDEXED mode)

Table 25: New or enhanced functions TRDPLight

6.1.3. Known Errors

Ticket #	Description
#285	WON'T FIX: MD replies are not sending source URIs
#286	tlm_reply() is missing a sourceURI parameter as defined in the standard
#281	TRDP_NOSESSION_ERR should be returned from tlm_reply() and tlm_replyQuery() in case of incorrect session (id)
#261	MD reply/add listener do not use send parameters
#5	MD: For sent unicast MD TRDP assumes that only one reply may be received (XLS #37).

An additional user-callable function has been introduced to realize ticket # 282 (API extension to reduce possible memory fragmentation).

6.1.5. tlc_presetIndexSession

Name	tlc_presetIndexSession	

Synopsis C	`TRDP_ERR_T tlc_presetIndexSession (`
	`  TRDP_APP_SESSION_T  appHandle,`
	`  TRDP_IDX_TABLE_T  *pIndexTableSizes);`	

Synopsis C++	`TRDP_ERR_T tlc:: presetIndexSession (TRDP_IDX_TABLE_T *pIndexTableSizes = NULL);`	

Abstract	Pre-sets the sizes and depths for the index tables used to accelerate and optimize the handling of ingress and egress traffic to be used by the high-performance targets. It shall be called before the first publishers or subscribers are added and is presumably used to avoid memory fragmentation for multi-application environments.
	When called with `pIndexTableSizes == NULL`, the following defaults are used:
	`100 /**< Max. number of expected subscriptions with intervals <= 100ms  */`
	`200 /**< Max. number of expected subscriptions with intervals <= 1000ms */`
	`10  /**< Max. number of expected subscriptions with intervals > 1000ms  */`
	`100 /**< Max. number of expected publishers with intervals <= 100ms  */`
	`15  /**< depth / overlapped publishers with intervals <= 100ms  */`
	`200 /**< Max. number of expected publishers with intervals <= 1000ms  */`
	`15  /**< depth / overlapped publishers with intervals <= 1000ms  */`
	`10  /**< Max. number of expected publishers with intervals <= 10000ms  */`
	`5  /**< depth / overlapped publishers with intervals <= 10000ms  */`
	`10  /**< Max. number of expected publishers with intervals > 10000ms  */`
	On a 64Bit system, this accounts for the additional pre-allocation of
	2 x blocks of 2480 Bytes (subscribers)
	1 x block of 12000 Bytes (publishers)
	1 x block of 24000 Bytes
	1 x block of 12000 Bytes
	1 x block of 120 Bytes
	1 x block of 80 Bytes
	If a later change in configuration demands larger table sizes, the memory will be re-allocated (and possibly fragmented) and a warning will be issued.
	This function is currently a no-op on standard targets.	

Parameters	`appHandle`	(C) handle returned by tlc_openSession()
Returns C	0 if OK, !=0 if error, see chapter **Fehler! Verweisquelle konnte nicht gefunden werden.**. of the User's Manual. TRDP_NO_ERR no error TRDP_INIT_ERR not yet inited TRDP_MEM_ERR parameter error	
Returns C++	0 if OK, if error exception thrown according to chapter **Fehler! Verweisquelle konnte nicht gefunden werden.**. of the User's Manual.

7. History Release 1.1.0.0

7.1. TRDPLight

7.1.1. Corrected Errors

TICKET #	Description
XLS #109	vos_getInterfaces for WIN32 does not read subnet masks
XLS #125	After TRDP rev. 891, if own IP address != 0; Subscriber becomes not able to register the socket discriptor which is created in tlp_subscribe() by the Subscriber. After that, Subscriber can not receive PD packet any more.
XLS #126	The TCP reception is not handling properly (WSA)ECONNRESET.
XLS #130	Although the maximum length of PDDATA is 1432 octets in the specification, a PD packet with 1436 octets of PDDATASET is allowed to be sent.
XLS #132	The statistic information gotton with tlc_getPubStatistics() is not for publisher but for subscriber.
XLS #133	Subscriber performs Join multicast. When numJoin is obtained in tlc_getStatistics(), the value is always 0.
XLS #134	While sending PD packet is performed repeatedly in Linux, when the clock time is turned back, sending PD packet is stopped. After that, when the clock time is set forward than the previous time not altered, sending PD packets is restarted.
XLS #135	Although Publisher sends PD packets, the value of numSend obtained in tlc_getPubStatistics() is always 0.
